(54) Title: TOOTHED BELT

(57) Abstract: Toothed belt (1) for use in contact with oil and comprising a body (2) and a number of teeth (4) extending from at least one surface of the body (2); the teeth are coated by a fabric (5); a resistant layer (8) comprising a plastomer based on fluorine with the addition of elastomeric material, in which the plastomer is present in a larger quantity than the elastomeric material, is applied by adhesion onto the coating fabric (5). The elastomeric material forming the body (2) of the belt (1) is a copolymer obtained from a dienic monomer and a monomer containing nitrile groups, in which the nitrile groups are between 33% and 49%, preferably 39%, in weight with respect to the copolymer.
